ENRICHING **LIVES.**

Nerolac Has a Tech Moat but a Brand Gap —
The Window to Act is FY26-FY28

NEROLAC PAINT+
Colours that Care

The market is massive but disrupted.
Nerolac must pivot on brand and EV now before the window closes.

01 | The Market is Massive & Growing

₹95K → ₹1.5L Cr
FY24→FY30 opportunity

9.3%
CAGR — 2× global rate

Structural demand from PMAY housing, ₹111L Cr infra, auto growth, and 432 Mn+ middle class. Industry grows at 1.5–2× India's GDP. Demand is durable, not cyclical.

02 | But the Competitive Rules Have Changed

₹10,000 Cr
Birla Opus investment

37% → 28%
Unorganised share declining

Birla Opus ends 30 years of oligopolistic stability with 38,000+ UltraTech dealers. The unorganised sector is collapsing — the organised players who capture this shift win.

03 | Nerolac's Strategic Imperative

40% OEM
Auto coating share — moat

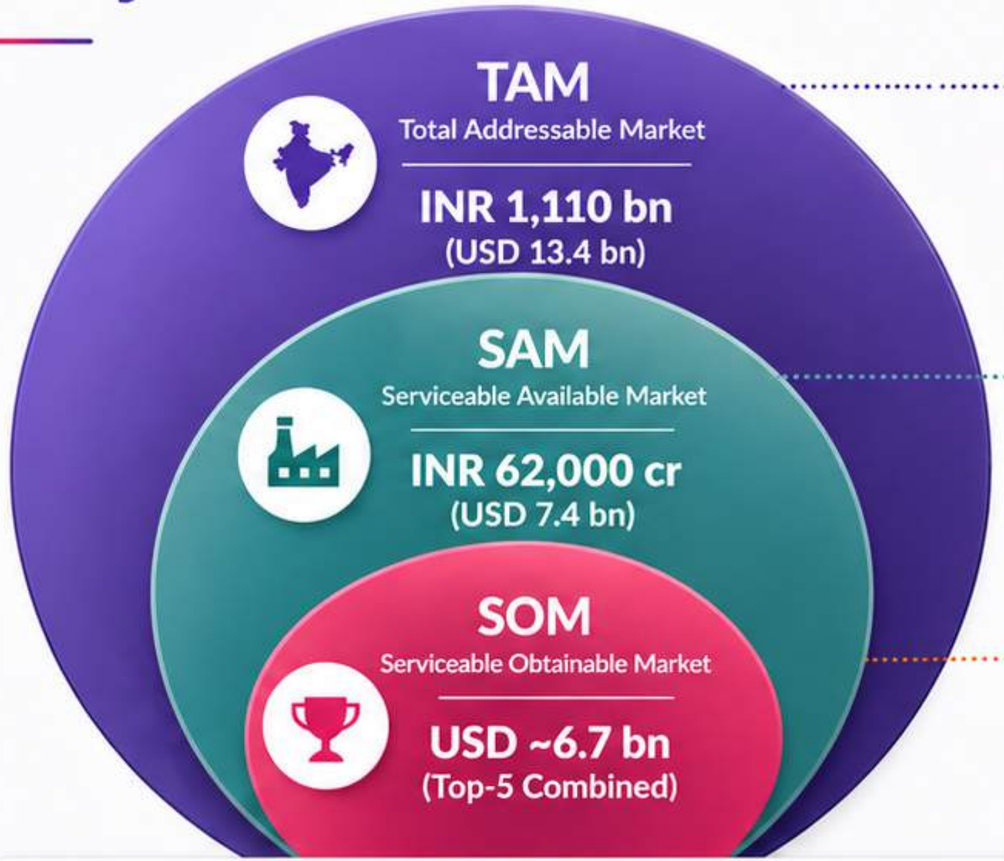
ZERO
Experience stores — gap

Nerolac's Kansai Japan technology is inimitable. But its decorative brand is underinvested by ₹300–500 Cr. The EV transition and sustainability mandate are tailor-made opportunities — if acted on now.

Therefore:
Nerolac must pivot from volume to value — leverage tech moat, close brand gap, capture EV opportunity in FY25–27.

Top 5 Players Control 90% of the Organised Market — Entry Barriers Are Structural

NEROLAC PAINT+
Colours that Care



TAM – Total Addressable Market

INR 1,110 bn • USD 13.4 bn

- Full Indian market
- ~3,000 manufacturers
- CAGR 8.75%–10% FY24

SAM – Serviceable Available Market

INR 62,000 cr • USD 7.4 bn

- Organised sector
- Pan-India brands
- 63%–70% of TAM Formal R&D

SOM – Serviceable Obtainable Market

USD ~6.7 bn (Top-5 Combined)

- Top 5 players
- ~90% of SAM
- Organised sector revenue

SOM SHARE BREAKDOWN AMONG TOP-5 ORGANISED PLAYERS

High concentration + high entry barriers = structural moat. The only way in is massive capital (Birla Opus) or niche differentiation.

Five Structural Tailwinds Make This a 9%+ CAGR Market Through 2031 — Demand is Non-Cyclical

NEROLAC PAINT+
Colours that Care

Policy-backed housing, infrastructure, automotive, income growth, and repainting compression all compound simultaneously

01 Real Estate & Housing

65–70%

of total paint demand

PMAY-U 2.0: 1 Cr houses, ₹10L Cr. Urban housing deficit: 29 Mn units. 80% of decorative demand from repainting — resilient even in construction downturns.

02 Infrastructure Push

₹111L Cr

NIP through FY30

PM Gati Shakti, AMRUT 2.0, Smart Cities — protective & anti-corrosion coatings for roads, bridges, metros. Direct benefit for Nerolac's industrial segment.

03 Auto + EV Transition

₹9,500 Cr

OEM coatings TAM by FY29F

India's 3rd-largest vehicle market. OEM coatings TAM grows from ₹5,800 Cr (FY24). EV creates new coating sub-segments — net positive for Kansai Nerolac's unique OEM position.

04 Rising Incomes & Premium Shift

432 Mn+

middle class & growing

GDP per capita → USD 4,195 by 2029. Distempers → emulsions → luxury finishes. 10% consumer tier upgrade = INR 8,500–10,000 Cr incremental revenue for organised sector.

05 Repainting Cycle Compression

5–8%

volume uplift per 1-yr compression

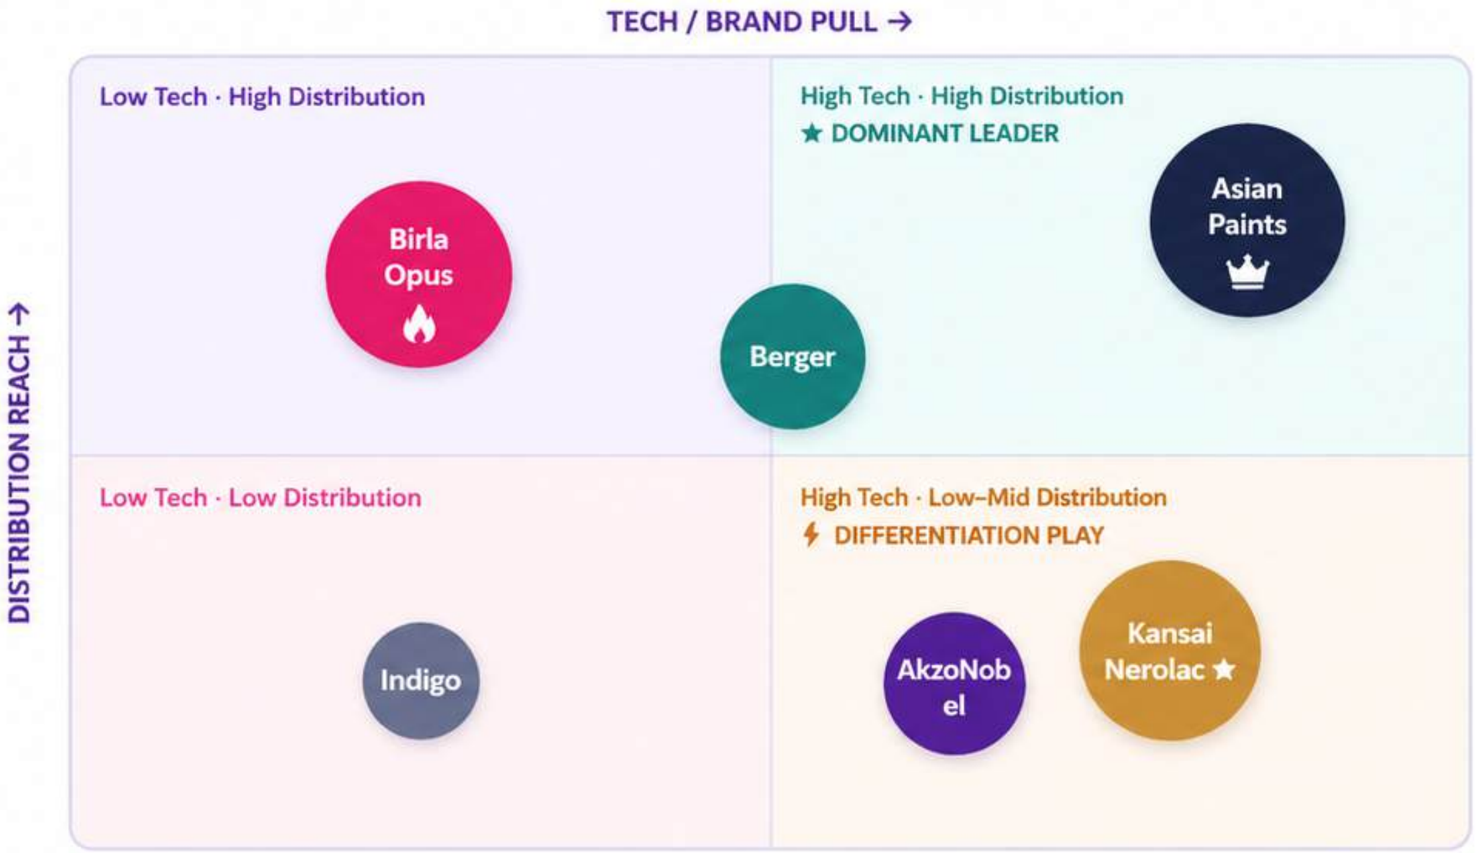
Urban cycles: 5–7 yrs → 3–4 yrs. 1-year compression = INR 5,500–8,800 Cr additional revenue. Social media driving aspirational home refresh at accelerating pace.

Demand is structural, not cyclical — all 5 drivers are policy-backed or income-linked and operate simultaneously.

Birla Opus Entry Ends 30 Years of Oligopolistic Stability, Threatening 200 bps of Industry Margin

NEROLAC PAINT+
Colours that Care

2×2 positioning: Distribution Reach vs. Technology/Brand Pull — Nerolac is uniquely placed in the Tech quadrant



Asian Paints

Dominant Leader — strongest on EVERY dimension. 75,000+ dealers + ColourNext brand + 20.5% EBITDA. Hard to attack head-on.

Kansai Nerolac

Tech Leader, Mid Distribution — unique Kansai Japan moat + 40% OEM share. Opportunity: move right on Distribution and up on Brand.

Birla Opus

Scale Entrant — UltraTech distribution from day 1 but ZERO brand equity and no tech moat. Economy tier attack only. FY27 earliest for premium.

Key Implication

Nerolac does NOT compete with Birla Opus on distribution or price. It competes on technology and premium — a completely different battleground.

Birla Opus enters the distribution quadrant — Nerolac's response must be technology + premium, NOT a price/distribution war.

NEROLAC PAINT+
Colours that Care

Industry Trends

Technology Disruption • Consumer Shift • Channel Evolution

Paint Has Shifted From a Commodity Product to a Technology-Enabled Consumer Experience Category

NEROLAC PAINT+
Colours that Care

Five dimensions of transformation — the basis of competition has fundamentally changed

DIMENSION	TRADITIONAL (LOSING)	FUTURE (NOW EMERGING)
Product Nature	Commodity — undifferentiated colour on a wall	**Technology-enabled functional coatings** (smart, antimicrobial, EV-specific)
Purchase Driver	Contractor-driven — the painter chose the brand	**Consumer-directed** — brand awareness, AI colour apps, experience stores
Channel Model	Dealer push — incentivise trade margins	**Brand pull — experience stores, D2C, digital visualisation**
Value Proposition	Functional only — cover and protect surfaces	**Aesthetic + functional — lifestyle and home personalisation**
Competition Basis	Scale and distribution depth alone	**Differentiation: technology, brand equity, sustainability credentials**

Industry shifting from product to experience + technology.
Companies still running the old playbook will structurally underperform.

Kansai Japan's EV Coating Portfolio Gives Nerolac an Inimitable 3–5 Year Technology Lead Over All Domestic Peers

NEROLAC PAINT+
Colours that Care

ICE vs EV coating requirements — a new sub-segment that is value-positive per vehicle and inimitable without MNC parent access

Coating Type	ICE Vehicle	EV Vehicle	Revenue Impact
Body Panel Coatings	Standard electro-coating, primer, basecoat, clearcoat	Same + lightweight thermal barrier coatings on panels	Neutral on volume
Battery Housing	Not applicable	Anti-static coatings + EMI shielding coatings for battery packs	**+₹1,200–1,800/vehicle**
Chassis Coatings	Standard anti-corrosion	Enhanced anti-corrosion for high-voltage components	**+₹800–1,200/vehicle**
Thermal Management	Not applicable	Thermal barrier coatings for heat management systems	**+₹600–900/vehicle**
NET REVENUE / VEHICLE	**~₹4,500–5,500**	**~₹7,100–9,400**	**~60–70% higher value per EV**

OEM Coatings TAM
₹5,800 Cr (FY24) → ₹9,500 Cr (FY29F)

Nerolac Auto OEM Share
~40% — Market Leader

VRIO: WHY THIS MOAT IS INIMITABLE

Valuable
EVs require ₹7K–9.4K coating revenue vs ₹4.5K–5.5K for ICE — value-positive transition

Rare
Only MNC-backed players (Kansai, AkzoNobel) have EV coating R&D. Asian Paints, Berger have no EV coating IP.

Inimitable
Kansai Paint Japan's EV partnerships with Toyota/OEMs = 3–5 yr IP head start. Cannot be licensed or copied.

Organised
Nerolac must sign 5-yr OEM agreements with Tata, Mahindra Electric, Ola, Ather by Q4 FY26 to capture this.

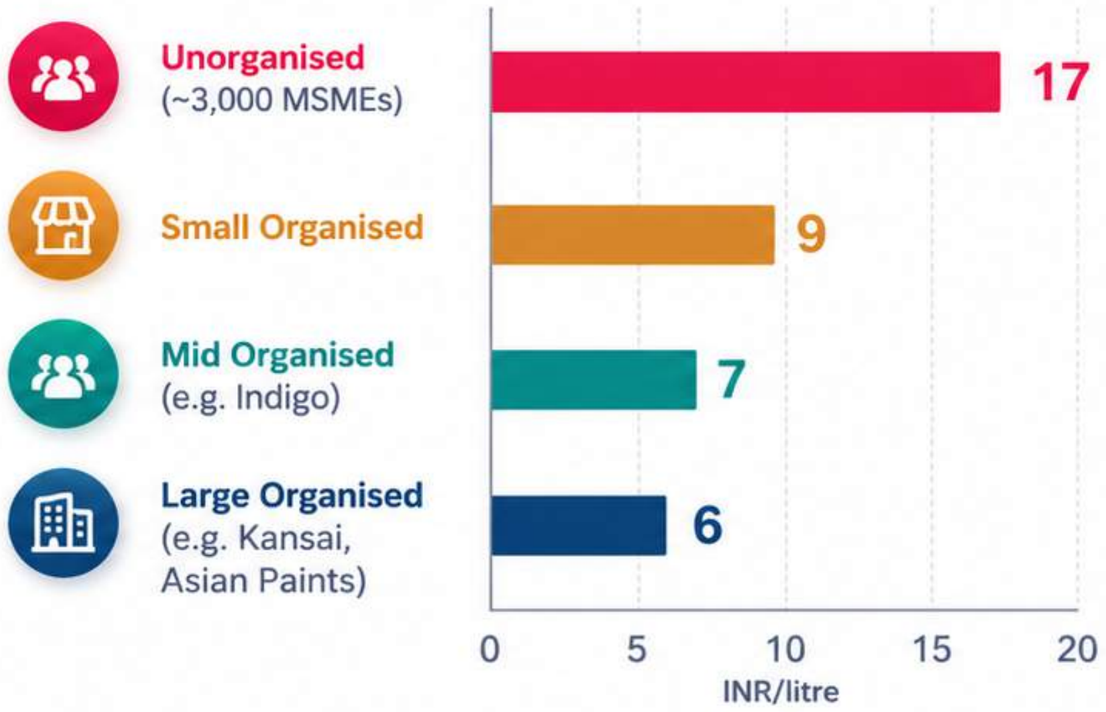
EV coatings = 60–70% higher revenue per vehicle.
Kansai Japan partnership = inimitable moat. Must lock OEM agreements by FY26.

VOC Regulations Act as a 5–10% 'Compliance Tax' on Unorganised Players — Organised Sector Gets a Structural Market Share Windfall

NEROLAC PAINT+ Colours that Care

Regulatory enforcement is not a risk for organised players — it is the single most powerful share migration accelerator

VOC Compliance Cost Estimate (INR/litre)



MoEFCC VOC Emission Limits

Critical

Organised players incur ₹5–8/litre compliance cost. Unorganised players incur ₹15–20/litre — equivalent to erasing their only cost advantage. Enforcement phased through FY27.

BIS IS 101 Mandatory Certification

High

Mandatory product certification removes uncertified unorganised products from retail. Organised players benefit from a clean shelf. Market share migrates automatically on enforcement.

EPR Packaging Norms

High

Extended Producer Responsibility for paint packaging. Small players lack collection infrastructure. Incremental ₹2–3/litre burden on unorganised adds to compliance gap.

LEED/GRIHA Green Building Specs

Medium

Government and premium residential projects mandate certified low-VOC paints. Only organised compliant players can bid. Creates a premium sub-segment with inbuilt specification pull.

₹5–8/litre compliance cost gap = effectively a 5–10% 'tax' on unorganised players → organised sector share 63% → 70%+ by FY30.

Nerolac's Zero Experience Stores Puts ₹800–1,200 Cr of Premium Revenue at Risk vs. Asian Paints' 150+ Store Network

NEROLAC PAINT+
Colours that Care

Consumer-directed shift + experience store gap = quantifiable revenue risk that demands urgent capex decision

CONSUMER-DIRECTED SHIFT

Segment	Consumer-Led %	Primary Shift Driver
Urban Tier 1	40–50%	AI apps, experience stores, social media influencers
Semi-Urban	20–30%	**TV/digital** brand campaigns, rising awareness
Rural	5–10%	Still painter/contractor-directed; long cycle

REVENUE AT RISK — NEROLAC

- Nerolac decorative revenue: ~₹4,150 Cr (55% of ₹7,540 Cr)
- Premium tier currently ~22% of decorative = **₹913 Cr**
- Premium consumers are now experience-store driven in Tier 1

Asian Paints: 150+ stores → brand pull, premium SKU conversion

Dulux: 30+ stores → premium urban fortress

Nerolac: ZERO stores → losing premium consideration at point of decision

Estimated revenue at risk: ₹800–1,200 Cr annually in premium tier

PROPOSED: PHYGITAL PARTNER MODEL

1 Impressions App (Digital Layer)

Upgrade AI colour visualisation to match Asian Paints ColourNext.
Virtual room simulation, architect integration.
Digital influence in Tier 1 rises from 20% to 50%+.

2 18 Focused Colour Impressions Stores

West/South Tier 1 only: Mumbai, Pune, Bangalore, Hyderabad, Chennai, Ahmedabad, Surat, Kochi.
Capex ₹90–120 Cr. Smaller footprint than AP Beautiful Homes — more focused, architect-facing.

3 Painter Digital Loyalty Network

Fastest-ROI channel investment in semi-urban/rural.
Digital painter app — order, track, reward.
Nerolac's painter base is an underleveraged asset that can be activated at low incremental cost.

Phygital model = App + 18 focused stores + painter loyalty.
Capex ₹90–120 Cr to recover ₹800–1,200 Cr revenue at risk — compelling ROI.

NEROLAC PAINT+
Colours that Care

Future Outlook

Megatrends • House View • Competitive Structure

Five Megatrends Will Shift Indian Paint from a Volume Game to a Value Game by 2035

NEROLAC PAINT+
Colours that Care

All five trends simultaneously advantage technology-backed, brand-invested organised players — particularly Kansai Nerolac

1 Premiumisation

Premium tier grows 2x faster. Consumer upgrade: distempers → emulsions → luxury. Festive = 25–30% of sales. 10% tier upgrade = ₹8,500–10,000 Cr revenue pool for organised.

2 Sustainability Mandate

Waterborne → 85%+ decorative by 2035. LEED/GRIHA mandates. Non-compliant unorganised players face shutdown. MNC tech = compliance advantage + brand premium.

3 Digital & D2C Disruption

AI colour tools shift urban purchase from dealer to brand. Asian Paints leads. Nerolac must invest ₹300–500 Cr A&P over 3 years. D2C stays single-digit % through FY30.

4 Competitive Intensification

Birla Opus reaches 7–9% share by FY29, primarily absorbing unorganised sector. Top 5 → Top 6. No destructive price war in base case. AkzoNobel parent review = wild card.

5 Smart & Functional Coatings

EV coatings, antimicrobial, heat-reflective → 12–15% of decorative revenue by 2035. Kansai Japan EV portfolio = 3–5 yr structural lead. Inimitable without parent access.

4 of 5 megatrends create specific Nerolac advantages — if EV, premium, sustainability, and phygital investments are executed in FY25–27.

House View: Market Reaches ₹1,3–1.5 Lakh Cr by FY30 — Even the Bear Case Grows at 6–8% CAGR

NEROLAC PAINT+
Colours that Care

Base Case is our primary projection; sensitivity analysis shows macro risk is manageable and margin-driven, not demand-driven

HOUSE VIEW (BASE CASE)

Market reaches ₹1,30,000–1,50,000 Cr by FY30 at ~9–10% CAGR.
Organised sector share: ~68%. Industry doubles in ~8 years.

BEAR CASE

₹90,000–1,00,000 Cr

CAGR: 6–8%

Real estate slowdown + crude >$110/bbl + Birla Opus price war. Even at this level, industry still grows — structural demand holds.

BASE CASE (HOUSE VIEW)

₹1,30,000–1,50,000 Cr

CAGR: 9–10%

- GDP 6.5% Housing moderate
- Crude $80–95/bbl
- Birla Opus absorbs unorganised

Organised sector share: ~68%

BULL CASE

₹1,80,000+ Cr

CAGR: 13.5–16%

GDP 7.5%+, PMAY acceleration, crude $75/bbl, premiumisation surges. Birla Opus absorbed at economy tier only.

SENSITIVITY: Key swing variables

Crude Oil
↑ $75/bbl: +200 bps margin
↓ $110+/bbl: –200 bps margin

Housing Starts
↑ 3.5 Mn/yr: +₹15,000 Cr market
↓ 1.8 Mn/yr: –₹18,000 Cr market

Birla Opus Share
↑ 4% (contained): AP gains
↓ 12%+ (overshoot): price war

Downside risk is cyclical margin pressure — demand remains structurally intact.

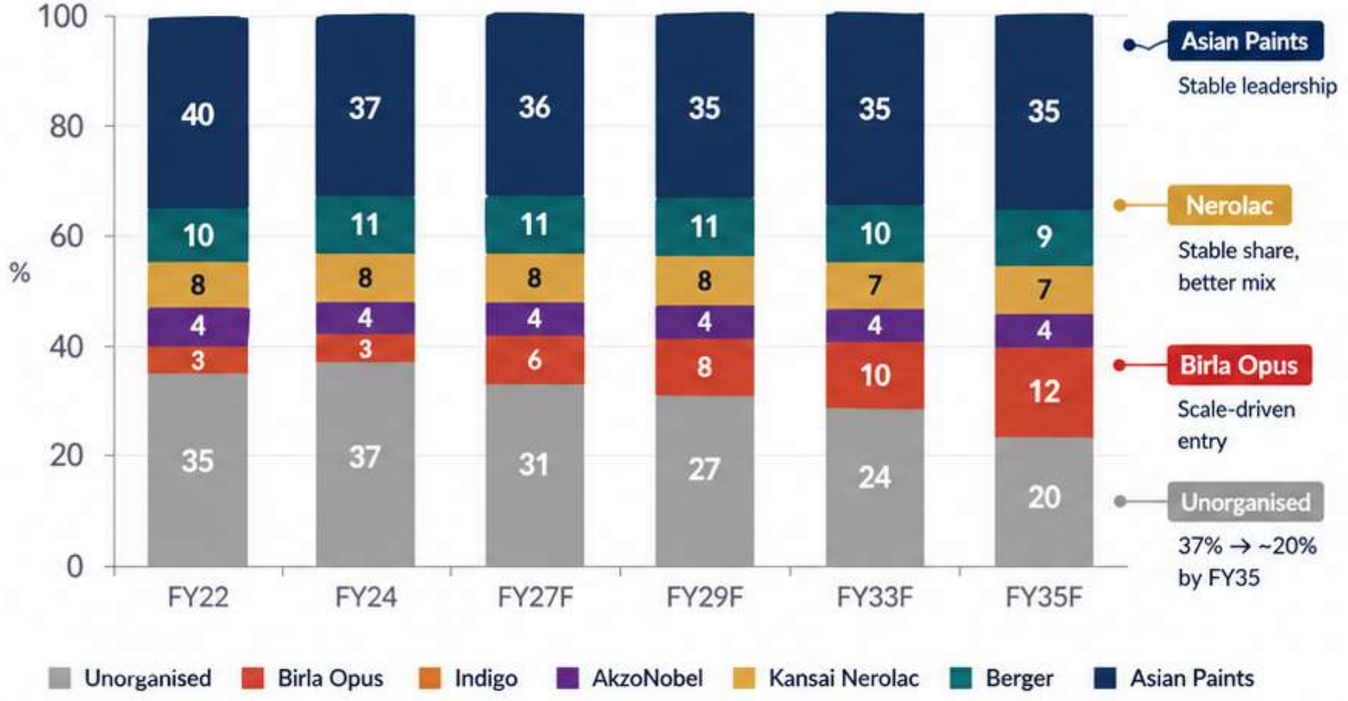
Nerolac's Industrial Core Insulates It More Than Asian Paints' Economy Decorative Against Birla Opus Competition

NEROLAC PAINT+ Colours that Care

Stacked share evolution FY24 → FY35 shows unorganised sector decline — and why Nerolac's 45% industrial mix is structurally defensive

Market Share Evolution (FY22 → FY35F)

100% Stacked



Why KN's Industrial Mix is Defensive

- Kansai Nerolac: 45% industrial, 55% decorative
- OEM automotive coatings = NOT industrial
- 3–5 yr qualification cycles that Birla Opus cannot shortcut

Different industry, different moat

Asian Paints: Economy Decorative Exposed

- 38% share concentrated in decorative
- Economy & mid-tier emulsions under pressure
- Birla Opus pricing aggressively at 5–7% below

High exposure to price war

The Unorganised Collapse = Organised Windfall

- Unorganised: 37% (FY24) → ~20% (FY35F)
- This ₹16,000–18,000 Cr of migrating share is the real prize
- Compliance, distribution & brand will decide winners

Major prize up for grabs

KN FY29 Position: Stable but Better Quality

- Nerolac's 7–8% share is stable
- Mix shift to higher industrial + premium
- EBITDA margin potential: 13.5% → 17%+

Quality mix drives better margins

Unorganised shrinks from 37% to ~20% by FY35. Nerolac's industrial core is sheltered — the real risk is losing premium decorative to Asian Paints and Birla Opus.

Strategy & Recommendations

Prioritisation Matrix • Kansai Nerolac 6-Point Agenda • Financial Bridge

Not Everything is 'High Priority' —
A Prioritisation Matrix Reveals Which Bets to Make First

NEROLAC PAINT+
Colours that Care

Impact vs. Feasibility matrix | 'Must Do Now' quadrant drives FY25–26 resource allocation

IMPACT: High ↑ / Low

PLAN FOR LATER
(High Impact, Low Feasibility)

- R-KN-5 Sustainability Brand

DO FIRST ★
(High Impact + High Feasibility)

- R-KN-1 EV Coating OEM Agreements
- R-KN-4 Experience Stores (18)
- R-KN-2 Decorative Premiumisation
- R-KN-3 Elite Dealer Programme

FILL-INS
(Low Impact, High Feasibility)

- R-KN-6 East India Partnership

DEPRIORITISE
(Low Impact, Low Feasibility)

FEASIBILITY: Low → High

PRIORITY SUMMARY

DO FIRST
- R-KN-1 EV OEM agreements
- R-KN-3 Elite Dealer Programme
- R-KN-4 Experience stores (urgent)
- R-KN-2 Premium sub-brand launch

PLAN FOR LATER
- R-KN-5 Sustainability brand repositioning (builds on base established by R-KN-1 & R-KN-2)

FILL-IN
- R-KN-6 East India distribution partnership (capital-light, lower urgency vs. West/South defence)

Prioritisation clarity = resource discipline.
Do R-KN-1, R-KN-3, R-KN-4 and R-KN-2 first — these have highest impact AND highest feasibility.

R-KN-1: Secure EV OEM Agreements by FY26 — Kansai's Most Defensible and Highest-Value Strategic Move

NEROLAC PAINT+
Colours that Care

EV coatings = 60–70% higher revenue per vehicle + inimitable Kansai Japan tech = strongest moat in Nerolac's arsenal

R-KN-1 — EV Coatings Leadership ★ HIGHEST PRIORITY

DO FIRST

- Sign 5-year OEM supply agreements with Tata Motors EV, Mahindra Electric, Ola Electric, Ather by Q4 FY26
- Establish dedicated EV coatings R&D centre in Pune leveraging Kansai Japan IP and Toyota supply chain
- Target 50%+ share of India EV OEM coatings by FY30 — EV revenue per vehicle is ₹7K–9.4K vs ICE ₹4.5K–5.5K
- Proof: OEM qualification cycles are 3–5 yrs — if not locked in by FY26, Nerolac risks losing EV OEM to PPG or Axalta

KPI:
EV OEM revenue: 25% of total OEM by FY29
50%+ EV OEM share by FY30

R-KN-2 — Decorative Premiumisation — Reduce Automotive Dependence

DO FIRST

- Launch 'Kansai Japan-imported' premium sub-brand in West/South Tier 1 cities by Q2 FY26
- Increase premium tier share: 22% → 35% of Nerolac decorative revenue by FY28
- Commit INR 150 Cr A&P over 3 years — finance from automotive margin (structurally higher, 45% of revenue)
- Japanese quality + sustainability = a premium narrative that Birla Opus cannot credibly replicate

KPI:
Premium tier revenue share: 22% → 35%
Decorative EBITDA margin +200 bps by FY28

R-KN-3 — Elite Dealer Programme — Defend Against Birla Opus

DO FIRST

- Lock-in top 5,000 dealers: +150 bps in-bill discount, tinting machine upgrades, exclusive premium SKUs, 3-yr loyalty
- Accept 50–100 bps economy tier share cession deliberately — don't fight Birla Opus on price
- Focus resource on margin pool defence, NOT volume defence at economy tier

KPI:
Elite dealer revenue retention ≥ 95%
Throughput per dealer: +15% by FY27

Pyramid Principle: EV coatings first — it leverages Nerolac's 40% OEM moat, is inimitable, and is value-positive. All other strategies support this anchor.

Phygital Strategy, Sustainability Repositioning and Geographic Focus Complete Nerolac's Brand-Led Growth Agenda

NEROLAC PAINT+
Colours that Care

R-KN-4: Experience stores | R-KN-5: Nerolac Nippon Green | R-KN-6: West/South defend + East partnership

R-KN-4: Phygital 'Colour Impressions' Partner Model

- 18 stores in 8 West/South metros — not full Beautiful Homes scale — focused, architect-facing
- Impressions App digital layer: AI colour matching, virtual room simulation, architect API integration
- Painter digital loyalty programme — fastest ROI in semi-urban/rural markets
- Capex ₹90–120 Cr | Target: recover ₹800–1,200 Cr premium revenue at risk from zero-store gap

Timeline: FY26–28
KPI: 18 stores open | Revenue/store | Architect referral ratio

IMPACT
KPI: ROI, Direct Premium Conversion

R-KN-5: 'Nerolac Nippon Green' Sustainability Brand

- Launch unified 'Nerolac Nippon Green' master brand — all premium SKUs low-VOC/zero-VOC by FY27
- Pursue LEED/GRIHA product certifications — government housing projects mandate compliance
- 'Japanese environmental heritage' narrative: credible, differentiated, and inimitable
- Neither Asian Paints nor Birla Opus can claim Japanese sustainability R&D provenance

Timeline: FY26–28
KPI: % revenue from certified SKUs | Brand sustainability recall score

IMPACT
Regulatory Tailwind + Premium Pricing Power

R-KN-6: Geographic Focus — Defend West/South, Partner East

- West/South: Execute R-KN-3 (dealer) and R-KN-4 (stores) — these are Nerolac's strongholds
- North: Volume opportunity via PMAY — mass emulsions, selective dealer deepening
- East: Partner-led entry via regional building materials distributor (Berger is East incumbent)
- Capital-light East model avoids destroying margins competing directly with Berger's 40-year network

Timeline: FY27–28
KPI: East revenue growth | Partnership execution | West/South share retention

IMPACT
Capital-Efficient Expansion with Risk Control

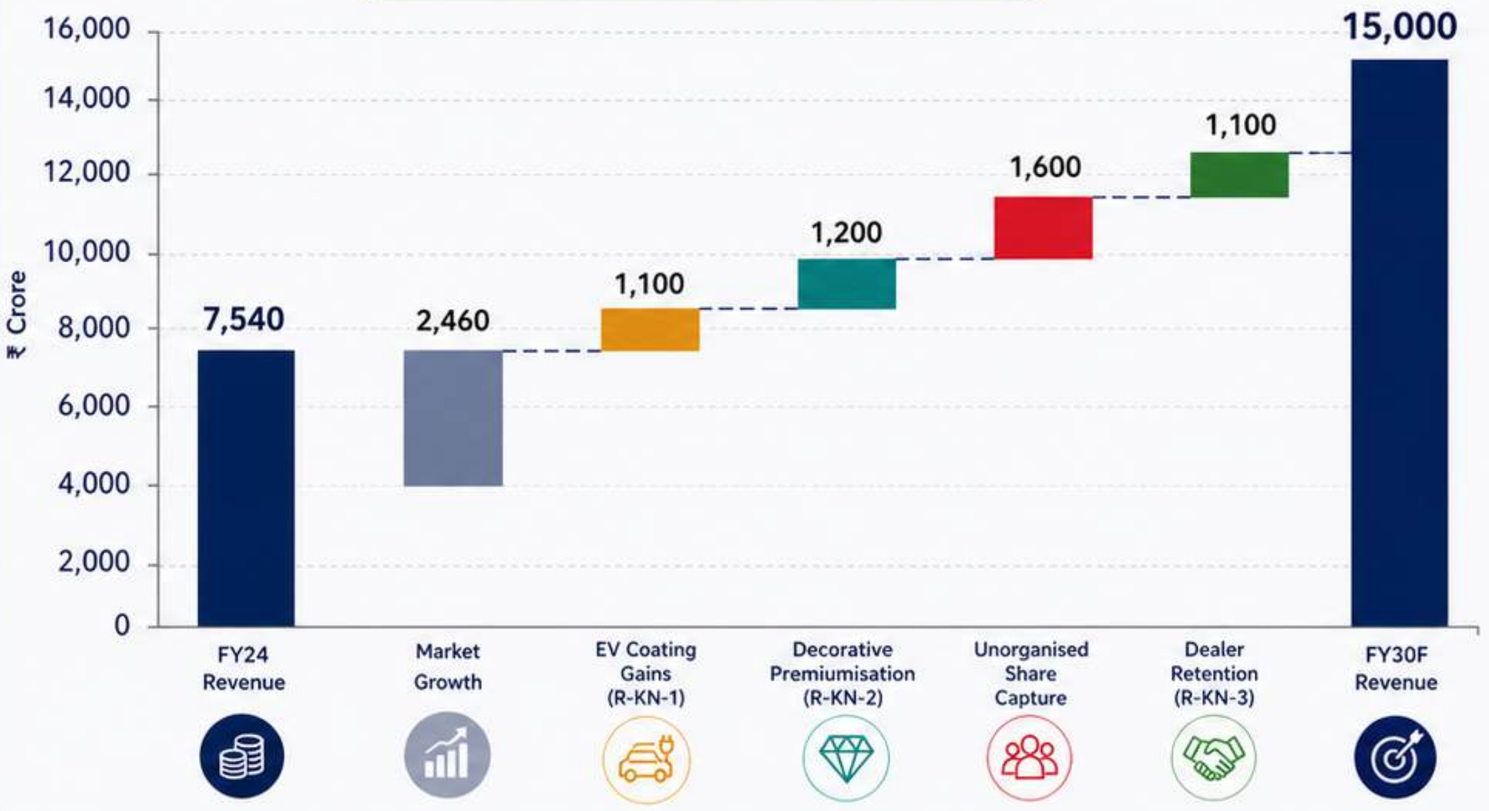
Phygital model + sustainability brand + geographic focus = the brand-led growth model that takes Nerolac from ₹7,540 Cr to ₹15,000 Cr.

How Nerolac Gets From ₹7,540 Cr (FY24) to ₹15,000 Cr (FY30)
— A Revenue Bridge Across Six Strategic Levers

NEROLAC PAINT+
Colours that Care

Market growth provides the base; EV coatings + decorative premium + unorganised capture provide the incremental value

REVENUE BRIDGE: FY24 → FY30F (₹ CRORE)



BRIDGE COMPONENTS

Market Growth (CAGR 9–10%) Baseline industry expansion. Nerolac retains ~8% organised share.	₹2,460 Cr
EV Coating Gains (R-KN-1) 50%+ EV OEM share × rising EV production volume × 60–70% higher revenue per vehicle.	₹1,100 Cr
Decorative Premiumisation (R-KN-2) Premium tier share 22% → 35%. Higher ASP per litre (+₹80–120) on growing base.	₹1,200 Cr
Unorganised Share Capture Nerolac's proportional share of 37% → 28% unorganised decline via compliance + distribution.	₹1,600 Cr
Dealer Retention (R-KN-3) Prevents dealer defection to Birla Opus. Elite 5,000 dealer programme ROI.	₹1,100 Cr

FY30 TARGET: ₹15,000 Cr | **EBITDA: 17%+**

Six levers. One destination.
From ₹7,540 Cr to ₹15,000 Cr —
driven by brand, innovation and distribution strength.

Scale + Compliance + Technology =
Structural Long-Term Advantage for the Organised Sector

NEROLAC PAINT+
Colours that Care

Four industry-wide strategic themes that apply to all players, not just Kansai Nerolac

1 Organised Sector Share Reaches 70%+ by FY30

63% → 70%+

Regulatory tightening (VOC, EPR, BIS) systematically burdens the unorganised sector. Organised players gain ~1.5–2% incremental annual revenue from compliance gap.

TiO_2 import supply chain resilience is a collective industry priority.

2 Regulatory Tightening = Organised Tailwind, Not Risk

₹5–8/litre

VOC compliance cost acts as a 5–10% 'tax' on unorganised players. Organised sector players with compliant products gain shelf space by default. Actively lobby IPA for enforcement acceleration.

3 TiO_2 Supply Chain Risk Must Be Collectively Addressed

70%

70% of TiO_2 imported from China — ₹2,800+ Cr annual import bill. Geopolitical risk + rupee volatility. Industry-wide investment in Meghmani Organics expansion; advocacy for mining policy reversal.

4 Digital & Data Capabilities are Now Competitive Weapons

2% → 8%

Experience stores share of category grows 2% → 8% by FY30. AI colour tools, D2C, painter digital loyalty. Asian Paints leads — gap must be closed by all incumbents within 3 years or consumer-directed shift advantages only AP.

Scale + compliance + digital capability = the three axes of long-term competitive advantage in the Indian paint industry.

Conclusion — The Strategic Verdict

NEROLAC PAINT+
Colours that Care

High-growth, structurally sound industry — ₹95K Cr → ₹1.5L Cr by FY30. Demand is policy-backed, not cyclical.

Short-term margin pressure from Birla Opus — but this is primarily an unorganised sector disruption, not a top-5 threat.

Long-term winners: premium players, technology-led companies, brand-driven organisations with distribution depth.

EV coatings, smart coatings, waterborne = the next decade's competitive moats. MNC-backed players hold a structural lead.

Nerolac's FY25–27 choices determine its FY35 position — the tech moat is real, but only if the brand gap is closed now.

FINAL TAKEAWAY

> "Differentiation—not scale—will define winners in the next decade."

— Group Future

For Kansai Nerolac

Execute R-KN-1 through R-KN-6 in FY25–27 in order of priority → ₹15,000 Cr revenue by FY30, EBITDA 13.5% → 17%+.
